Kyle Dahl

Agentic AI builder. Founder, web developer, salesperson.

Open to full-time roles: AI engineer · AI lead · in-house AI consultant · technical sales
hello@kyledahl.dev · kyledahl.dev · LinkedIn · Oklahoma City, open to relocating

I run teams of AI agents that build real software. My studio's team has seven of them: an engineer, a critic, a creative director, a security reviewer, and legal, finance and growth leads. Each has a written brief. None is allowed to ship without my go. Since October 17, 2026 that team and I have put an iPhone app on the App Store and an iPad coloring book on TestFlight, and launched three websites. My day job since 2022 is full-time consultative, in-home sales, so I listen first, explain hard things plainly, and ask for a decision.

WORK

Founder, KD Farm and Garden LLC (studio name: Digital Farm and Garden) · 2025 to now

A small studio I co-own that makes original apps and games. I am its only human builder: I direct a team of AI agents and keep every ship decision for myself. The LLC was formed in 2025; the software work began Oct 17, 2026.

- Designed an agent team with seven specialist roles (engineer, critic, creative, legal, finance, growth, security), each with a written brief and a narrow job. None is allowed to ship; one, the security reviewer, is allowed to stop a launch.
- Built the operating system the agents run on: memory as plain files in git, a start-of-session checklist, a close routine that writes the day's log, and skills for repeatable jobs (TestFlight upload, server deploy, morning report).
- Set a quality loop: creative work goes to an independent critic agent that scores it 1 to 10 and never rounds up. Work loops until it earns a 10, capped at five rounds, then a human decides.
- Kept humans in charge: nothing merges, deploys, publishes or spends without my own go-word.
- 364 commits on 22 days since October 17, 2026 (merges included; actual, all branches, counted November 20, 2026 before this site's own commits), built outside a full-time job.

Sales representative, consultative, in-home sales (full time) · 2022 to now

I listen first, explain hard things plainly, and ask for a decision.

- About 1,200 in-home presentations since 2022. Roughly 40% ended in a sale at the first meeting (my own count, rounded).

Executive chef, fine-dining restaurants, more than one kitchen · 2015 to 2020

BUILT

GutterGuide (https://apps.apple.com/us/app/id6829027833) · **Live** · Swift, SwiftUI, Cloud Run, TestFlight

iPhone and iPad app, live and free on the U.S. App Store. Type an address and it estimates the roofline and gutter footage from 3D map data, then draws a diagram you can correct with a tap.

Lantern Valley · **On TestFlight** · Swift, ColoringKit, StoreKit

An iPad coloring book for young kids, on TestFlight with a subscription and a parent gate. 24 pages across two worlds and a fill engine that stays in the lines. Designed to collect no data. An AI narrator, labeled as AI, is planned for the next build.

Ironwood Tech (https://ironwoodtech.org) · **First course Dec 8** · Ruby on Rails, Fly.io, Docker, Stripe, Claude API

My own AI school, at ironwoodtech.org. A Rails portal on Fly.io with a course player and AI tutors that are clearly labeled as AI. Not accredited, and it says so. The first course, AI for Life and Work, opens December 8, 2026.

The agent team · **In daily use** · Claude Code, agents, skills, evals, computer use, git

The system behind everything else: seven specialist agents, memory as plain files in git, skills for repeatable jobs, a critic loop and human go-words. Claude Code wrote this website overnight to my brief; the Critic scored it round by round.

digitalfarmandgarden.com (https://digitalfarmandgarden.com) · **Live** · HTML, CSS, JavaScript, SVG

The studio site: an illustrated valley map you explore instead of a menu.

A short AI news show (pilot) · **Pilot, not posted** · Canvas, JavaScript, video

A short AI news show I anchor. One pilot is taped and not yet posted. A browser tool I directed makes each episode's graphics in a few minutes.

SKILLS

- **Agentic AI, myself:** agent design, multi-agent review loops, skills and tools, file-based memory, human-in-the-loop gates, prompt and context engineering, computer use, Claude Code
- **Sales and leadership, myself:** discovery, live demos, closing, plain-language teaching, running a team by written brief
- **Web, trained (Full Stack Software Development certificate, 2021):** HTML, CSS, JavaScript
- **Agents build, I direct:** Swift, SwiftUI, StoreKit, Ruby on Rails, SVG and canvas, Claude API, Docker, Fly.io, Cloud Run, Stripe, TestFlight and App Store submission

CERTIFICATE

- Full Stack Software Development certificate program (non-degree), McCombs School of Business, The University of Texas at Austin, 2021

STUDY

Computer science and data science, Ironwood Tech (my own school; self-directed, not accredited). Independent study, started November 2026; 20 hours a week planned.
